

# SCHOOL TRANSPORT SOLUTION

## The solution

The school transportation solution is a gateway to the future of school travel management. It is a highly technological system that allows for the safe tracking of students during their travels and the monitoring of the vehicle fleet in order to make changes to the transportation logistics.

A graphic and tactile console is installed on board the school vehicles. Intuitive and easy to use, it allows the identification of students embarking and disembarking from the vehicles, as well as the location and time, and informs the driver and the CSS in real time

## For parents

The safety of your children is our one priority. To ensure this, tracking of your children's movements on school vehicles, including pick-up and drop-off times and locations, will be sent via timely notifications to your mobile device (or desktop). A downloadable application is available from popular sites. With just a few easy clicks, you'll have access to the information you need to ensure your peace of mind!

### CONTACT ITS MAX

Address : 130 rue de l'Isère, Candiac, Québec, Canada, J5R 0M2

## Integration at six levels

The fundamental of the school solution is to make a harmonious integration with any type of user. The solution consists of several interconnected underlying systems. Information recorded by a student is interpreted according to different privileges by the parents, the school and the service center administrators.

### STUDENT

Accurate tracking of trips on school vehicles. Possibility of holding a student card for school transportation.

### PARENT

Tracking of children via notifications on the mobile application. Warnings and alerts sent by the school directly to the parent.

### DRIVER

Easy-to-use mobile application in the school vehicle. Displays assigned routes and paths. Includes stops with associated students.

### TRANSPORTER

Overview of all schools assigned to the carrier. Tables of multiple statistics available for correction.

### SCHOOL

Monitoring of the school's vehicle fleet. Visualization of the school vehicles' running routes. Knowledge of delays.

### SERVICE CENTER (ADMINISTRATOR)

Full access to a variety of high-level systems for overall project management - with numerous reports at your disposal.

## The application

A School Application is available for download if your GSC participates in the program. It is compatible with the usual mobile platforms, i.e. Android and iOS.

The equivalent functionalities of this application can also be found directly on the web portal of your CSS in such a case.

Access to the application is free. As a recognized parent of your children by your CSS, you will be able to confirm your "parent" user account to participate in a secure and authenticated way in the program.

From here you can set your preferences for receiving notifications of your children's transportation directly to your mobile device, including when and where they will be picked up and dropped off.

The school can also quickly inform you if there are any delays in your child's transportation - or if the school itself is closed due to, for example, a snowstorm, and other useful information.
